**Johannes W. Rohen MD, Chihiro Yokochi MD, Elke Ltjen-Drecoll MD : Color Atlas of Anatomy: A Photographic Study of the Human Body** before purchasing it in order to gage whether or not it would be worth my time, and all praised Color Atlas of Anatomy: A Photographic Study of the Human Body:

The on-going core of this atlas is its standard of realistic illustrations that portray anatomical relationships. Photographs of actual cadaver dissections along with numerous schematic drawings aid the student in anatomic orientation. Chapters are organized by region, in order of a typical dissection. Each chapter contains two sections: a description and illustration of organs, and a depiction of those organs within the regional anatomy. New to this edition is an increase of MRI pictures, approximately 30 schematic drawings made even more precise, and an updated text

where appropriate. A Brandon-Hill recommended title.
