By AHMoorhead
I used this textbook in a TESL course and liked this approachability of the writing, a rare occurrence with college textbooks! The information is clear and just what you need for this subject.

Very helpful book but it was not very strong papers were about to fall of.

Conversation and speaking skills are the key building blocks for much of language learning. This text increases teachers awareness about spoken language and suggests ways of applying that knowledge to teaching second-language interaction skills based on insights from Conversation Analysis (CA). *Conversation Analysis and Second Language Pedagogy*: reviews key CA concepts and findings directly connects findings from CA with second language pedagogy presents a model of interactional practices grounded in CA concepts includes numerous transcripts of actual talk invites readers to complete a variety of tasks to solidify and extend their understandings features a useful collection of practical teaching activities. The time is ripe for a book that blends conversation analysis and applied linguistics. This text takes that important step, extending the reaches of these once separate academic fields. Assuming neither background knowledge of conversation analysis nor its connection to second language teaching, it is designed for courses in TESOL and applied linguistics and as a resource for experienced teachers, material developers, and language assessment specialists seeking to update their knowledge and hone their craft.
