books, and award-winning software. We Get Results Students who take our six-week GMAT CAT course have an average score increase of 80 points (verified by International Communications Research). The proven techniques that we teach in our course are in this book. And If It's on the GMAT CAT, It's in This Book The Princeton Review knows that acing the computer-adaptive GMAT is very different from getting a 4.0 in business school. We don't try to teach you everything there is to know about math and English--only the techniques that you need to score high on the computer-adaptive GMAT. There's a big difference. In Cracking the GMAT CAT, we'll teach you how to think like the test-makers and:

- Eliminate answer choices that look right but are planted to fool you
- Solve GMAT sentence-correction problems by spotting key errors in the questions
- Ace the writing-assessment section by knowing exactly what they're looking for
- Crack the math sections by "plugging in" numbers in place of letters on the algebra problems, and by memorizing a few key formulas for geometry questions
- Use process of elimination to solve tricky data-sufficiency problems

Study the techniques and strategies in this book, and then practice them on the sample computer-adaptive tests inside. The questions in these tests are exactly like the ones you'll see on the actual computer-adaptive GMAT, and we fully explain every solution.
