Devra Davis does a great job with helping the reader understand what has happened ...By Brenda JohnstonDevra Davis does a great job with helping the reader understand what has happened behind the scenes as people have considered the health dangers of cell phones over the course of their development. The science showing the danger has been there all along, but the industry has managed to suppress this knowledge. I am grateful for the insights in this book, especially those which help families protect their babies and young children, as well as the babies they are expecting. It all makes so much more sense, as I reflect on why the medical world seems so reluctant to acknowledge both the danger to human health and the obvious effects that cell phones have had when patients have been injured or died because of their use. I eagerly recommend this book to all who are willing to look at these facts.4 of 4 people found the following review helpful. Do Your Children Use Cellphones? READ THIS BOOK!By marianNow that the World Health Organization has reported a possible link between cell phone useage and brain cancer, this book by Dr. Devra Davis has become even more relevant. A fast and fascinating read, 'Disconnect' is an excellent resource, detailing the evolution of cell phones, potential dangers from radiofrequency-emitting devices and recommendations for safe usage by children and adults. While I will never stop using my cell phone, the information offered in this startling piece has given me the understanding and confidence to do so wisely.0 of 0 people found the following review helpful. Great book.By Country ManThe science is there. Industry and government are profiting from a technology that has problems. With Dr. Devra and others like her were being taken seriously. Greed kills and injures yet again.

For more information, visit www.devradavis.com.The much-anticipated, explosive expose of how cell phone use damages brain cells, especially in children, by one of the world's foremost scientific experts in the field. Devra Davis presents an array of recent and long suppressed research in this timely bombshell. Cell phone radiation is a national emergency. Stunningly, the most popular gadget of our age has now been shown to damage DNA, break down the brain's defenses, and reduce sperm count while increasing memory loss, the risk of Alzheimer's disease, and even cancer. The growing brains of children make them especially vulnerable. And half of the world's four billion cell phone used by people under twenty. Davis, the founding director of the toxicology and environmental studies board at the U.S. National Academy of Sciences, takes readers through the dark side of this trillion-dollar industry. Health experts have long been frozen out of policy-making decisions about cell phones; federal regulatory standards are set by the cell phone industry itself. Cell phone manufacturers have borrowed the playbook of the tobacco industry. One secret memo reveals their war plan against reports of cell phone dangers. Among a host of fascinating characters, Davis introduces Om P. Gandhi, a world expert on how cell phone radiation penetrates the human brain. Once a consultant to major cell phone companies, Gandhi now refuses to work with them. Franz Adlkofer led the multi-lab study that showed once and for all that brain cell DNA is unraveled by cell phone microwave radiation-and, as Davis dramatically portrays, it nearly cost him his career. As this eye-opening call to action shows, we can make safer cell phones now. Why would we put our children at risk of a devastating epidemic of brain illness in the years to come?

Davis makes a strong case in her book that we've underplayed the possible threat from cell phones for too long...Time and again, she shows the way that industry has been able to twist science just enough to stave off the possibility of any regulation."Time Magazine "Disconnect will surprise many and anger some. It tells all too human stories behind the science and engineering of cell phones and raises important unresolved questions about this universal technology."Frank A. Barnes, Professor, University of Colorado at Boulder, Member of the National Academy of Engineering "A critically important book that is a mustread for parents and policy makers. A surprising, welldocumented, and compelling call for action."Phil Lee, M.D., former United States assistant secretary for health, Chancellor Emeritus, University of California, San Francisco "An amazing and important book that must be read to be believed. Are these devices safe for humans? The 'don't ask, don't tell' approach of the industry is irresponsible at best, criminal at worst. Read and learn why and how to protect yourself and your loved ones."Mark Hyman, M.D., author of The UltraMind Solution, Chairman, The Institute for Functional Medicine "A brilliant and courageous tour de force by one of our nation's leading environmental health experts. Davis provides a detailed expos that forces us all to take a good, hard look at what we know and what we don't know about cell phones." Ronald B. Herberman, M.D., Founding Director Emeritus, University of Pittsburgh Cancer Institute "Devra Davis has written a book that will change the way the world thinks about cell phones and the potential public heath disaster they represent."Carlos SantosBurgoa, M.D., M.P.H., Ph.D., Past President, International Society for Environmental Epidemiology"This book will be a mustread for anyone who cares about our children's brains."David Servan-Schreiber, M.D., Ph.D., author of AnticancerAbout the AuthorDevra Davis, Ph. D., M. P. H., is a scientist, professor, speaker, and acclaimed author, and recently testified before a United States Senate committee about the dangers of cell phone use. Her first book, When Smoke Ran Like Water, was a National Book Award finalist. She is the founder of Environmental Health Trust, www.environmentalhealthtrust.org. She lives in Washington, D.C., and Jackson, Wyoming.From AudioFileDevra Davis may be a maverick scientist, but she's not given to alarmism. In DISCONNECT, she argues that radiation from excessive cell phone use may be related to brain tumors and male infertility. Even skeptical listeners should find this

audiobook fair-minded, as Davis lays out the evidence and avoids overstating her case. It's a shame that Emily Durante's narration clashes so badly with Davis's writing. Durante is usually a strong narrator of fiction, but her tone and delivery are at odds with this material. Unfortunately, the real disconnect here is between author and narrator.
